INSTITUTE OF SCIENTIFIC RESEARCH ON VEDAS (I-SERVE)

A Journey of Vedic Wisdom, Scientific Research and Knowledge Dissemination

(Brief Institutional History, Achievements, Research Activities and Contributions form **2004 -2016**.)

1. Introduction : The Vision and Inspiration:

The Institute of Scientific Research on Vedas (I-SERVE), established in 2004 under the divine inspiration of His Holiness Sri Sri Ganapathi Sachidananda Swamiji of Avadhoota Dattapetham, Mysore, represents an important initiative towards exploring understanding, preserving and disseminating India's traditional knowledge systems.

The fundamental vision of I-SERVE was to bring the richness of Vedic literature and ancient Indian intellectual traditions to the knowledge of contemporary generations. This vision extended beyond the preservation of traditional scriptures. It emphasized the need to examine the scientific principles, observations, concepts and knowledge embedded in ancient Indian literature through systematic research and contemporary scientific perspectives.

The Institute was therefore conceived by Prof. K.V.Krishna Murty, our founder Chairman, as a platform where Vedic Scholars, scientists, academicians, researchers, Sanskrit experts and students could interact and collectively explore the intellectual and scientific dimensions of India's ancient heritage.

The principal objectives included:

1. Preserving and promoting the traditional knowledge systems of India.
2. Exploring scientific concepts and observations contained in Vedic and Sanskrit literature.
3. Establishing meaningful interaction between ancient Indian knowledge and modern scientific disciplines.
4. Encouraging interdisciplinary research involving science, mathematics, astronomy, Ayurveda, metallurgy, environmental studies and other subjects.
5. Disseminating research findings through seminars, conferences, publications and academic interactions.
6. Introducing younger generations to the intellectual contributions of ancient Indian scholars.
7. Promoting research collaborations with universities, scientific institutions and national and international organizations

This vision provided the foundation for the establishment and subsequent development of I-SERVE.

2. Establishment of the Institute at Hyderabad

The Institute initiated its activities in Hyderabad in 2004, under the able leadership of Prof. K.V.Krishna Murty, an erudite scholar of both ancient and modern system of knowledge.

The initial establishment was made possible through the generous support of philanthropists and well-wishers who believed in the importance of preserving India's traditional knowledge and encouraging scientific research.

A building was generously provided by philanthropist Sri T.Balaji at Alkapuri, Hyderabad, which served as the initial premises for the Institute.

The formal inauguration took place in the august presence of His Holiness Sri Sri Ganapathi Sachidananda Swamiji, scientists, scholars, academicians and students.

Dr. D. R. Rao, Managing Director of Neuland Laboratories, extended additional support by providing a vehicle for the Institute's operational requirements.

These contributions from different individuals and organizations demonstrated the collective commitment of society towards the objectives envisioned by I-SERVE

3. Institutional Organization and Registration

For an institution undertaking sustained scientific, educational and charitable activities, an appropriate legal and administrative framework was essential.

Accordingly, steps were initiated to register the organization with the Registrar of Societies, Government of Andhra Pradesh, Hyderabad.
The organization's constitution and bylaws were formulated incorporating its objectives, vision, mission, administrative structure and proposed areas of activity.

The Institute was registered as a Trust under the name **Institute of Scientific Research on Vedas (Sri Janardanananda Saraswathi Jnana Mandiram).**

This registration provided the necessary institutional identity and legal framework for undertaking research, educational, charitable and collaborative activities.

Since the institute was envisaged as a charitable and research – oriented organization supported substantially by donations and philanthropic contributions, applications were also made to the Income Tax Department for the applicable tax exemptions and approvals.

The relevant approvals and registrations enabled the Institute to approach donors, philanthropists and funding agencies with greater institutional credibility.

4. Development of Basic Infrastructure and Human Resources

During the initial stages, the Institute operated with limited financial resources. Nevertheless, the commitment of the management and the support of philanthropists enabled it to establish essential and administrative and operational facilities.

The initial staff Included:

- Sri A.Vallinath – DTP and documentation activities.
- Sri. M. Padmanabham – Administrative and managerial support.
- Sri Anjaneyulu – Driver and operational assistance.

These employees were appointed on basic minimum wages, keeping in view the limited financial resources available during the establishment phase.
The Institute also received valuable voluntary services from scientists, university professors, Sanskrit scholars, Ayurvedic doctors and other Professionals. Amazing scholarship of Prof. K.V.Krishna Murty, the Chairman, acted as force of attraction in gathering together, experts of various fields.

This combination of a small administrative team and a large network of voluntary experts became one of the distinctive features of I-SERVE.

5. Health Services and community outreach

An important dimension of the Institute's activities was its commitment to social welfare and community health.

With the voluntary support of Ayurvedic medical practitioners, including Dr. M.R.K. Murthy and the late Dr. Virinchi, together with the services of a staff nurse, the Institute initiated regular evening dispensary services.

Free medical consultations and medicines were provided to people in need.

This activity reflected the Institute's belief that traditional knowledge should not remain confined to academic discussions but should also contribute to public welfare.

The initiative also provided an opportunity to explore Ayurveda as a traditional Indian medical knowledge system through documentations, scientific discussions and research – oriented activities.

6. Academic Lectures and Student Awareness Programmes

From its early years, I-SERVE emphasized knowledge disseminatiion and the involvement of younger generations.

Regular lectures, seminars and awareness programmes were organized in universities, colleges and educational institutions in Hyderabad and other locations.

The programmes covered subjects such as:

- Scientific concepts in Vedic literature.
- Vedic Mathematics and its educational applications.
- Ancient Indian astronomy and mathematics.
- Contributions of ancient Indian scientists.
- Traditional Indian knowledge systems.
- Contemporary relevance of Sanskrit literature

Faculty members from different arts and science colleges extended their cooperation in organizing these programmes.

The objective was to encourage students to develop an appreciation of India's intellectual heritage while maintaining a scientific and analytical approach to understanding traditional literature.

These activities helped I-SERVE to develop academic relationships with educational institutions and create awareness among student communities.

7. Association of Prof. K.V.R.S. Murthy with I-SERVE

A major step in the development of the Institute occurred in 2008 when Prof. K.V.R.S. Murthy, a retired scientist from CSIR – Indian Institute of Chemical Technology (IICT) , Hyderabad joined the I-SERVE team.

With his professional experience in scientific research and technology development, he contributed to developing a framework for examining Vedic knowledge in association with contemporary scientific disciplines.

Under the leadership and guidance of this team, the Institute increasingly focused on research documentation, scientific presentations, academic collaborations and the preparation of research proposals for government funding agencies.

8. Recognition by the Department of Scientific and Industrial Research

One of the most significant achievements in the institutional development of I-SERVE was obtaining recognition from the Department of Scientific and Industrial Research (DSIR), Ministry of Science and Technology, Government of India, as a **Scientific and Industrial Research Organisation (SIRO).**

The recognition enhanced the Institute's standing as a research – oriented organization and provided an important institutional foundation for approaching government departments and scientific funding agencies.

Subsequently I-SERVE submitted research proposals to several government departments including :

- Department of Science and Technology (DST)
- Department of Biotechnology (DBT)
- Departments concerned with history, culture and heritage.
- Other relevant government and allied agencies.

Several research projects were undertaken with the support received through these initiatives.

The recognition also encouraged the Institute to expand its research activities and develop collaborations with universities and other academic institutions.

9. Income Tax Recognition and Philanthropic Funding Support

Another important development was obtaining the applicable Income Tax Department approvals for charitable and scientific research activities.

The Institute secured tax-related recognition and exemptions to facilitate donations and philanthropic support.

In particular, the Institute obtained approval under the relevant provisions of the Income Tax Act relating to scientific research contributions, including Section 35(1), as applicable during the relevant period.

The provision relating to weighted deductions for eligible scientific research donations was particularly significant in encouraging contributions from philanthropists and corporate donors.

These statutory recognitions were important in establishing financial credibility and strengthening the Institute's capacity to undertake research programmes.

10. Foreign Contribution Regulation Act (FCRA) approval.

In 2009, I-SERVE obtained permission under the Foreign Contribution Regulation Act (FCRA) enabling the Institute to receive eligible foreign contributions for its approved activities.

This was another important milestone in the institutional development of I-SERVE.

The approval opened opportunities for interaction with international researchers, scholars, academicians and philanthropic organizations.

It also strengthened the possibilities of understanding collaborative research and educational programmes with institutions and individuals outside India, subject to applicable statutory requirements.

The FCRA approval reflected the Institute's intention to develop and international outlook while remaining committed to its fundamental objectives.

11. Some of the Major National Seminars and Scientific Conferences

Organization of National Seminars and Conference was one of the most visible academic activities of I-SERVE.

These programmes provided a common platform for scientists, Sanskrit scholars, university administrators, researchers and students to discuss the relevance of India's ancient scientific heritage. I-SERVE organized on an average, at least one event in every quarter of an year.

Some of the major programmes described below

11.1. National Seminar on the Spectrum of Vedic Sciences

I-SERVE organized several academic programmes addressing the broad spectrum of Vedic Sciences, with particular emphasis on identifying scientific concepts and traditional knowledge in ancient Indian literature.

The programmes brought together experts from different disciplines and provided opportunities to discuss the historical, philosophical and scientific dimensions of Vedic knowledge.

11.2. Conference on Indian Sciences in the Pre-Adi Sankara Period

Date : 14 December, 2007; Venue: Shilparam, Hitech City, Hyderabad.

The conference focused on the scientific and intellectual developments in India before the period of Adi Shankaracharya.

The programme was attended by eminent personalities, including :

- Prof. R. Ramanamurthi, General President, Indian Science Congress.
- Prof. Lingamurthy, vice –Chancellor, Kakatiya University, Warangal.
- Dr. D. R. Rao, Neuland Laboratories, Hyderabad.
- Prof. O.R. Reddy, Vice – Chancellor, Dr. B.R. Ambedkar University, Hyderabad.

The deliberations explored India's contributions to scientific knowledge, mathematics, astronomy and other intellectual disciplines.
The conference was important in bringing together distinguished academic leaders and researchers to discuss India's scientific heritage.

11.3. National Seminar on Acharya Jagadish Chandra Bose and Ancient Indian Thought

Date: 21 December 2008; Venue: Pravachana Mandapam, Ashtalakshmi Temple, Vasavi Colony, Hyderabad.

This seminar focused on the contributions of Acharya Jagadish Chandra Bose and the relationship between his scientific thinking and ancient Indian intellectual traditions.

The programme provided an opportunity to examine the scientific contributions of one of India's pioneering scientists and explore the broader philosophical and intellectual environment of Indian knowledge systems.

The seminar was part of I-SERVE efforts to promote awareness of India's scientific personalities and their relevance to contemporary scientific education.

11.4. National Seminar on Vedic Sciences: Contemporary Relevance

Dated :2 October 2010; Venue : Sri Ganapathi Sachidananda Trust, Chennai.

This national seminar addressed the contemporary relevance of Vedic sciences.

The programme was attended by eminent personalities, including :

- Padma Bhushan Dr. G.V. Rmakrishna.
- Prof. Sivakumar, former Vice – Chancellor, Sri Chandrasekharendra Saraswathi Viswa Mahavidyalaya, Kanchipuram.
- Other distinguished scientists, academicians and scholars

The seminar examined the relevance of traditional Indian knowledge in the contemporary scientific and educational environment.

The participation of eminent scientists and academic leaders enhanced the stature of the programme.

11.5. National Seminar on scientific Dating of Ancient Events Before 2000 BC

Date : July 2011 ; Venue Jawaharlal Nehru University, New Delhi.

This was one of the important and ambitious academic initiatives undertaken by I-SERVE, Delhi Chapter.

The central theme was:
Scientific Dating of Ancient Events Before 2000 BC: An interdisciplinary Approach.

The seminar aimed to explore the possibility of dating events described in ancient Sanskrit manuscripts through the examination of astronomical references and their correlation with other scientific and historical evidence, under the leadership of **Smt. Sarojbala**, Incharge of Delhi Chapter of I-SERVE.

The methodology discussed included:

1. Identification of planetary positions and astronomical references in ancient Sanskrit manuscripts.
2. Application of planetary and astronomical software to examine possible dates.
3. Correlation of astronomical findings with archaeological evidence.
4. Examination of geological and anthropological information.
5. Consideration of paleobotanical and oceanographic evidence.
6. Study of ecological changes and remote-sensing observations.
7. Interdisciplinary assessment of historical interpretations.

The seminar was graced by the presence of His Excellency **Dr. A.P.J. Abdul Kalam**, former President of India, as Chief Guest.

The programme also included the participation distinguished guests from the Government of India, including cabinet ministers, senior government officials and representatives of scientific and cultural organizations.

Smt. Saroj Bala, Member Secretary, Income Tax Department, Government of India, and Director of I-SERVE, Delhi Chapter, served as Seminal Director.

The seminar provided an important platform for discussing scientific approaches to the chronology of ancient Indian events.

Its significance lay in encouraging dialogue between astronomy, archaeology, geology, anthropology and historical research.

The initiative reflected I-SERVE's commitment to interdisciplinary investigation and the scientific examination of India's ancient literary traditions.

12. Memorandum of Understanding and Academic Collaborations

Recognizing that research and knowledge dissemination require institutional partnerships, I-SERVE initiated collaborations with universities and other organizations.

Memorandum of Understanding (MoU's) were entered into with eleven prominent institutions, including :

1. GITAM University, Visakhapatnam
2. Gayatri Vidya Parishad, Visakhapatnam
3. Dr. B.R. Ambedkar Open University, Hyderabad.

4. Pragathi Resorts Limited, particularly in relation to herbal and traditional knowledge activities.
5. Sanskrit Academy of Hyderabad.
6. EMESCO Publications, Hyderabad.

These collaborations were intended to promote:

- Joint academic programmes.
- Student Awareness and knowledge dissemination.
- Research discussions and interdisciplinary studies.
- Seminars and workshops.
- Exploration of traditional knowledge applications.
- Academic interactions between university faculty and I-SERVE researchers.

The MoU's helped I-SERVE extend its activities beyond its own institutional premises and develop connections with higher educational institutions.

They also provided opportunites to introduce traditional knowledge-related subjects into academic discussions and educational programmes.

13. Major Research Areas and Projects Undertaken.

Over the years I-SERVE developed a broad research agenda covering different areas of traditional Indian knowledge and contemporary scientific enquiry.

The major areas of work included the following:

13.1. Ayurveda and Health Sciences.

Ayurveda is one of India's major traditional knowledge systems, with a long history of medical literature, clinical practices and medicinal plant knowledge.

I-SERVE undertook activities relating to Ayurveda, including public health services, academic discussions and research-oriented programmes

The areas of interest included

- Traditional medical knowledge.
- Medicinal plants and herbal preparations.
- Ayurvedic principles and health practices.
- Documentation of ancient medical literature.
- Research into the scientific basis of traditional health practices

The free evening dispensary services were an important expression of the Institute's social commitment.

13.2. Weather Forecasting and Earthquake prediction

Traditional Indian literature contains observations relating to seasons, atmospheric phenomena, planetary movements and natural events.

I-SERVE explored research activities concerning weather forecasting and earthquake prediction through the study of traditional observations and their possible relationship with modern scientific approaches.

The subject required interdisciplinary inputs from atmospheric sciences, geophysics, astronomy and environmental studies.

Such research needs systemic validation against measured meteorological and seismic data.

This project was headed by **Dr.G.V. Rama**, former Meteorologist of I-SERVE, Sriharikota. This project is being continued by a team of Astrologers, under the leadership of Prof. Padmakara Sarma, Osmania University, Hyderabad.

13.3. Vedic Mathematics

Vedic Mathematics was another important area of activity.
The Institute promoted awareness of mathematical concepts and computational methods associated with traditional Indian mathematical literature.

Activities included:

- Student aware programmes
- Lectures and demonstrations.
- Mathematical problem-solving techniques,
- Applications in educational settings.
- Discussions on the historical development of Indian mathematics.
- Publishing books on the above subjects.

The objective was to encourage interest in mathematics among students and explore the educational relevance of traditional mathematical approaches.

13.4. Ancient Indian Metallurgy and Material Sciences

Ancient Indian metallurgy represents an important field of technological heritage.

I-SERVE explored traditional knowledge relating to metals, alloys, metal processing and materials technology.

Particular attention was given to references in ancient Sanskrit texts, including discussions relating to Bharadwaja's Vimana Shastra and the concept referred to as Gantarava Loha (Sound absorbing metal)

The research interest included :

- Ancient metal production techniques.
- Traditional metallurgical knowledge
- Metal compositions and processing methods.
- Historical materials and their applications.
- Scientific examination of references in ancient manuscripts.

Such references require critical textual examination and experimental materials characterization before conclusions can be drawn about their technological feasibility.

13.5. Scientific Dating of Ramayana and Mahabharata Events.

One of the Institute's major areas of academic interest was the chronology of events described in the Ramayana and Mahabharata. This project was undertaken by the Delhi Chapter of I-SERVE, under the leadership of Smt. Saroj Bala.

The Institute explored astronomical references in Sanskrit manuscripts, particularly planetary positions, nakshatras, eclipes and other celestial observations.

The objective was to examine possible historical dates using astronomical software and correlate the results with archaeological, geological, anthropological and other available evidence.
This area of research represents an interdisciplinary interface between astronomy, Sanskrit studies, history and archaeology.

It also generated academic discussion on the importance of scientific methodology in studying India's ancient historical traditions.

13.6. Amshubhodhini and Surya Siddhanta

I-SERVE also explored traditional astronomical literature, including Amshubodhini and Surya Siddhanta.

These texts are of interest for their references to astronomical observations, planetary movements, time calculations and cosmological concepts.

The research objective was to study their mathematical and astronomical content and examine their relevance to the historical development of Indian astronomy.

13.7. Sanskrit Panini Grammar and Computer Applications

The grammatical system developed by Panini represents one of the most sophisticated linguistic frameworks in the history of human knowledge.

I-SERVE explored the relevance of Paninian grammar to computational applications and language processing, under the leadership of Sri Vasudev Rao Vadhoothkar of Hyderabad.

The subject offers opportunities for research in:

- Formal grammar.
- Computational linquistics.
- Sanskrit language processing.
- Rule – based language systems.
- Natural language processing.
- Digital preservation of Sanskrit texts.

The study of Paninian grammar in relation to computer science is an important interdisciplinary area with contemporary relevance.

13.8. Publications and Knowledge Dissemination

Publication of research findings and academic materials was an important component of I-SERVE's activities.

The Institute encouraged researchers and scholars to prepare papers, books and educational materials on different aspects of Indian knowledge systems.
The publications were intended to make traditional knowledge accessible to students, researchers, academicians and the general public.

The Institute's publication activities also included the documentation of research seminars, conference proceedings and scholarly contributions.

13.9. Indic Intellectual Tradition – Prof. Khosla Vepa

Another important academic contribution associated with the Institute was the work relating to the Indic Intellectual Tradition by Prof. Khosla Vepa, USA.

The subject encompasses India's traditional intellectual contributions, including philosophy, science, mathematics, language, astronomy and cultural knowledge.

Such documentation helps establish a broader understanding of the development of Indian knowledge systems and their place in the history of world civilization.

14. International Scientific Contributions of Prof. U.V.S. Seshavatharam

Another important scientific contribution to I-SERVE came through the voluntary association of Prof. U.V.S. Seshavatharam.

He contributed several research papers in theoretical physics, gravitation and related scientific objectives.

His research activities covered the themes such as:

- Universal gravitation
- Cosmological models
- Bubble theory
- Fundamental physical constants
- Theoretical interpretations of the universe
- Related mathematical and physical concepts

His papers were published in international scientific journals and presented at scientific conferences and academic forums in different countries, including the USA, Germany and Sigapore, as reported by the Institute.

The Institute also developed international academic interactions through these research contributions.

His participation in scientific conferences where distinguished international scientists, including Noble laureates, were present was a valuable addition to the academic profile of I-SERVE.

The reported publication portfolio of approximately 150 papers represents an important body of scientific work associated with his research activities.

The publication list and conference records provide a valuable documentary resource for recording this contribution.

His association demonstrated the Institute's willingness to encourage research in both traditional knowledge systems and contemporary theoretical science.

15. Institutional Achievements: An Overview

The Institutional development of I-SERVE under the alround administrative ability of our Chairman, Porf. K.V.Krishna Murty, can be viewed through several major achievements.

A. Institutional establishment

- Establishment in 2004, under the inspiration of Sri Sri Ganapathi Sachidananda Swamiji.
- Initial premises provided by a philanthropist at Alakapuri, Hyderabad.
- Initial capital assistance of Rs. 12 lakhs from Avadhoota Dattapeetham.
- Support from philanthropists for infrastructure and operational requirements.

B. Legal and statutory recognition

- Registration as a Trust.
- Applicable charitable tax exemptions.
- Recognition under the relevant provisions relating to scientific research donations.

- DSIR recognition as a Scientific and Industrial Research Organisation (SIRO).
- FCRA approval in 2009 and other tax exemptions, under the guidance of our esteemed auditor **Sri Kalyandas Gadale**, Hyderabad.

C. Scientific and academic development

- Participation of scientists and voluntary faculty members.
- Organization of National Seminars and Conferences.
- Development of university and institutional collaborations.

D. Social and educational contributions.

- Free evening medical dispensary services.
- Student awareness programmes.
- Lectures on Vedic sciences and Vedic mathematics.
- Academic interaction with universities and colleges.
- Promotion of traditional Indian knowledge systems.
- Free classes on Indian Agricultural Systems.

E. Research and publication

- Research proposals and supported projects.
- Research activities covering Ayurveda, Astronomy, Mathematis, Metallurgy, Sanskrit and Theoretical Physics, Ancient Agriculture.
- Publciation and documentation of traditional knowledge.
- Promotion of interdisciplinary research.

16. The Distinctive Institutional Model of I-SERVE

One of the distinguishing features of I-SERVE has been its ability to mobilize the voluntary services and expertise of scientists, academicians, Sanskrit scholars, medical practitioners and philanthropists, which happened due to alround versatility of our Chairman Prof. K.V.Krishna Murty.

Unlike conventional research institutions that depend primarily on large institutional budgets and permanent scientific establishments, I-SERVE developed through a collaborative model based on:

1. Institutional guidance.
2. Philanthropic contributions and charitable support.
3. Voluntary scientific and academic participation.
4. Collaboration with universities and educational institutions.
5. Government recognition and research funding opportunities.
6. Public awareness and educational activities.

This model demonstrated that an institution devoted to the preservation and scientific examination of traditional knowledge could develop through collective commitment and cooperation.

The Institute also provided a platform for bringing together individuals from different scientific and intellectual backgrounds.

17. Overall Impact and Contribution

The journey of I-SERVE from 2004 to 2016 represents a sustained effort to bring India's traditional intellectual heritage into contemporary academic and scientific discussions.
Its contributions can be viewed in five major dimensions.

Preservation of knowledge: The Institute encouraged the study, documentation and dissemination of Vedic and Sanskrit literature and other traditional Indian knowledge systems.

Scientific enquire: It promoted discussions and research on subjects connecting traditional knowledge with contemporary scientific disciplines.

Academic interaction: Through national seminars, conferences, lectures and university collaborations, it created opportunities for interaction between scientists and traditional scholars.

Social responsibility: The provision of free medical services and student awareness programmes reflected its commitment to society.

National and International engagement: Government recognition, FCRA approval, international publications and scientific interactions helped extend the Institute's academic reach.

The Institute's activities also demonstrated the importance of interdisciplinary research in understanding the history and evolution of knowledge.

18. Future Vision and Strategic Roadmap

As the Institute moves forward, there is an opportunity to strengthen its original vision and establish I-SERVE as a more comprehensive centre for research on Indian knowledge systems.

The following initiatives were kept in mind.

18.1. Establishment of a Centre for Indian knowledge Systems

Develop a dedicated research centre focusing on Vedas, Vendangas, Upanishads, Puranas Ayurveda, mathematics, astronomy and traditional technologies and to develop this as a Deemed University.

18.2. Digital Documentation and Preservation

Create a digital repository of ancient manuscripts, research papers, Sanskrit texts, translations, seminar proceedings and institutional publications.

18.3. Modern Scientific Validation

Develop interdisciplinary research teams involving scientists, engineers, Sanskrit scholars, historians and subject experts.
Research claims should be evaluated through appropriate scientific methods, experimental studies and independent peer review.

18.4. University Collaborations

Strengthen existing MoUs and develop new collaborations with IITs, IISc, CSIR laboratories, central universities, Sanskrit universities and other research institutions.

18.5. Young Researcher Development

Introduce fellowships, internships, student research projects, workshops and annual research competitions for younger generations.

18.6. International Academic Network

Develop research partnerships with universities and institutions abroad to promote comparative studies of traditional knowledge systems and their historical and scientific contributions.

18.7. Publications and Knowledge Disseminations

Establish a regular research publication programme, including books, monographs, peer-reviewed papers, conference proceedings and digital educational materials.

18.8. Sustainable Institutional Funding

Develop a structured funding strategy through eligible government research grants, philanthropic contributions, institutional partnerships and endowments, in accordance with applicable statutory requirements.

19. Conclusion: Carrying Forward the vision

The vision of I-SERVE should therefore continue beyond the preservation of ancient literature. It should encourage critical understanding, systematic documentation, scientific investigation and the responsible application of traditional knowledge wherever validated evidence supports such applications.

As India progresses towers becoming a global knowledge leader, institutions such as I-SERVE have an important role in connecting its rich intellectual heritage with modern science, technology and education.

The journey that began in 2004 with the blessings of Sri Sri Ganapathi Sachidannanda Swamiji continues as a sustained movement for the preservation, scientific exploration and dissemination of India's traditional knowledge system.

Report by : Sri K.V.R.S. Murthy,
Director, I-SERVE
